Subject: Briefing bullets. -- 04/01/13 am

- \* Operations continued overnight in all 3 divisions, which included pressure washing in the neighborhood, skimming and vacuuming of oil, and monitoring boom in the creek.
- \* Pumping of water from cove to lake continued overnight to add freeboard for additional rainfall. No oil has been observed in cove.
- \* Air monitoring continues. The safety officer reported monitoring last night was below any action levels. Monitoring results provided to schools, along with advisement on keeping children from any oil.
- \* As of 04/01, Exxon is estimating 4,000 to 7,000 barrels were released. The pipeline division continues to try to refine that number.
- \* Approximately 9,000 bbl water/oil collected... Mostly water. This is revised from yesterday due to better frac tank measurements.
- \* Only a few animals/wildlife found oiled and being rehabilitated.
- \* Resources on hand: 2 EPA, 4 START.
